CAREER OBJECTIVE

Backend and DevOps-oriented Software Engineering undergraduate at UCLA. Skilled in building scalable APIs, distributed systems, and automation pipelines with modern DevOps practices. Seeking Software Engineer or DevOps Engineer roles to apply cloud infrastructure, CI/CD, and containerization expertise in real-world production systems.

EDUCATION

University of California - Los Angeles (UCLA)

Bachelor of Science in Electrical Engineering

Los Angeles, CA

Expected Jun. 2027

- **Relevant Coursework:** Algorithm and Complexity; Computer Organization; Data Science; Discrete Structures; Logic Design of Digital Systems; Probability and Statistics; Software Construction; Systems and Signals

EXPERIENCE

Software Engineering Intern (Part-Time)

Sep. 2025 – Present

Daily Bruin

- Maintained and scaled backend systems supporting **60K+ weekly users** at UCLA.
- Deployed **Docker + Kubernetes** containers for automated deployment and recovery.
- Built optimized **Django REST APIs** with SQL/MongoDB and CI/CD pipelines for internal tools.

Lead Full Stack Developer / Project Manager (Full-Time)

May 2023 – Dec. 2023

Hoopsterz Corp.

Seoul, South Korea

- Built production web app using **MERN stack**, deployed on **Vercel & AWS S3**.
- Improved API latency by **25%** and boosted engagement by **30%** via performance tuning.
- Managed full-cycle development in architecture, deployment, and optimization.

PROJECTS

What's My ATS | *Next.js 16, TypeScript, Tailwind CSS, FastAPI, PostgreSQL*

Oct. 2025 – Present

- Developed full-stack AI app analyzing resumes using **FastAPI + spaCy NLP** and Redis queues.
- Implemented client side with **Next.js 16 (App Router + Tailwind)** and integrated **Gemini API**.
- Released beta with **50+ users**, guiding upcoming feature roadmap for 2026.

Bruin Bites | *MongoDB, Express, React Native, Node.js, API*

Sep. 2025 – Present

- Developing a mobile app that helps UCLA students discover **real-time budget-friendly food spots** near campus using custom APIs and web scraping tools.
- Integrated a **custom pre-prompted Gemini API** aggregating grocery and restaurant data from **Grok API** and **Google Maps API** for smarter recommendations.
- Designed and deployed a scalable backend with the **MERN stack** to deliver fast, personalized restaurant search results.

NetChill – HackSC 2023 (1st Place, Global Connections Vertical) | *Flutter, Prisma*

Feb. 2023

- Developed a cross-platform mobile/web application using **Flutter (Dart)** with responsive design.
- Collaborated in an Agile environment to deliver a fully functional MVP, placing 1st among 200+ competitors.

Hang – LA Hacks 2023 | *React Native, Google Maps API, NestJS*

Apr. 2023

- Developed an end-to-end mobile app that helps users **discover optimal meetup spots** along travel routes using real-time geolocation data.
- Integrated **Google Maps API** with a dynamic **recommendation engine** to personalize results based on proximity and travel time.
- Built scalable backend services with **NestJS** and deployed prototype during LA Hacks 2023.

TECHNICAL SKILLS

Cloud & DevOps: AWS (S3), Docker, Kubernetes, GitHub Actions, Vercel, CI/CD, Linux

Programming Languages: Python, JavaScript, TypeScript, C/C++, Dart, SQL, Bash

Frameworks/Libraries: FastAPI, Django, React, React Native, Next.js, Node.js, Express, Flutter

Databases: PostgreSQL, MongoDB, Firebase

Tools: Git, Postman, VS Code, Google Cloud Console, Agile Collaboration
